

With our thermal camera, K & S Ventures, Inc. can scan electrical cabinets and components for a non-contact view of conditions, quickly identifying hotspots and potential problematic areas, before the real trouble occurs.

Detect Problem Areas Before the Real Problems Occur

In production plants, office facilities, hospitals or hotels, our infrared camera instantly makes hot spots visible on a clear thermal image. We scan electrical cabinets and components and survey multiple wires and connections to get an instant picture of potential trouble. K & S Ventures, Inc. can detect the problem area and repair it before real problems occur.
